Background

The protein encoded by CDC5L (cell division cycle 5 like) shares a significant similarity with Schizosaccharomyces pombe cdc5 gene product, which is a cell cycle regulator important for G2/M transition. This protein has been demonstrated to act as a positive regulator of cell cycle G2/M progression. It was also found to be an essential component of a non-snRNA spliceosome, which contains at least five additional protein factors and is required for the second catalytic step of pre-mRNA splicing.

Recommended Dilution

IHC: 1: 100 - 1: 300

ELISA: 1: 5000
