

Na+/K+-ATPase Alpha2 Polyclonal Antibody

Description

Product type Primary Antibody

Code BT-AP05764

Host Rabbit

Isotype IgG

Size 20ul, 50ul, 100ul

Immunogen The antiserum was produced against synthesized peptide derived from human ATP1A2. AA range:971-

1020

Mol wt 112265

Species reactivity Human, Mouse, Rat, Monkey

Clonality Polyclonal

Recommended application WB, ELISA

Concentration 1 mg/ml

Full name Na+/K+-ATPase alpha2 Antibody

Synonyms ATP1A2; KIAA0778; Sodium/potassium-transporting ATPase subunit alpha-2; Na(+)/K(+) ATPase alpha-2

subunit; Sodium pump subunit alpha-2

This product is for research use only, not for use in human, therapeutic or diagnostic procedure.

Background

The protein encoded by ATP1A2 belongs to the family of P-type cation transport ATPases, and to the subfamily of Na+/K+-ATPases. Na+/K+-ATPase is an integral membrane protein responsible for establishing and maintaining the electrochemical gradients of Na and K ions across the plasma membrane. These gradients are essential for osmoregulation, for sodium-coupled transport of a variety of organic and inorganic molecules, and for electrical excitability of nerve and muscle. This enzyme is composed of two subunits, a large catalytic subunit (alpha) and a smaller glycoprotein subunit (beta). The catalytic subunit of Na+/K+-ATPase is encoded by multiple genes. ATP1A2 encodes an alpha 2 subunit. Mutations in this gene result in familial basilar or hemiplegic migraines, and in a rare syndrome known as alternating hemiplegia of childhood.

Recommended Dilution

WB: 1: 500 - 1: 2000 ELISA: 1: 20000
